

## **PROJECT PREREQUISITE**

**DOMAIN-** IOT

**PROJECT TITLE:** GAS LEAKAGE MONITORING AND ALERTING SYSTEM FOR INDUSTRIES

**TEAM ID:** PNT2022TMID15954

**TEAM MEMBERS:** 1) BHERMAL ADARSH JAIN (TEAM LEADER)

2) GUVVALA NIKHIL REDDY

3) JAY BALDIYA JAIN

4) A. LALITH KUMAR

### **IBM CLOUD SERVICES:**

- Before you create a project, understand the requirements for storage, collaborator eligibility, and catalog integration. You can create projects if you have the Watson Studio, Watson Knowledge Catalog, or other services that provide tools in projects.
- You must associate an IBM Cloud Object Storage instance with your project to store assets. Each project has a separate bucket to hold the project's assets. If you are not an administrator for the IBM Cloud Object Storage instance, it must be configured to allow project creation.

## WATSON KNOWLEDGE CATALOG INTEGRATION REQUIREMENTS:

- The project and the catalog must be created by members of the same IBM Cloud account, or, if your company set up SAML federation on IBM Cloud, employees of the same company.
- If you want to add catalog assets to the project, you must select the **Restrict who can be a collaborator** checkbox during project creation. If you want to only publish assets to a catalog, you don't need to restrict the project.
